MEMORANDUM FOR: Director of Security

SUBJECT: Internal Communications System in NPIC

1. NPIC is interested in exploring the possible utility of several types of internal communications systems including initially such equipment as telecriber and closed circuit television. To this end we are planning to connect several locations within Building 213 by means of shielded, universal coaxial cable. Such an installation will allow us to test a variety of systems.

2. We realize that there can be security problems connected with such installation but it is our intent to proceed slowly, acquire the transmission and receiving equipment on a loan basis and to plan on checking it out using only unclassified materials.

3. In light of the above we are asking your initial approval of this plan with the understanding that your office would participate fully with us in the checkout of all equipment and transmissions and in no event would we put any classified material on the system until such time as it had received your full approval.

4. We are anxious to get started as quickly as possible and will appreciate your earliest approval.
